

## **Dentimax Practice Management Software Recommendations:**

Intel Pentium 4 or higher – the Intel Core 2 Duo chip is supposed to be amazing

512 Mega Bytes of RAM or more – I recommend 1 Gig

Microsoft Windows XP or Vista – I always go with Windows XP Pro or a Vista Business application.

Now days, I would get 40 Gigs of hard drive space or more – I don't think you can buy a Dell Desktop with less than 80 Giga Bytes

## **Dentimax Digital Imaging Software Recommendations:**

While DentiMax Imaging's computer requirements are actually rather modest, DentiMax suggests getting the latest and best equipment you can afford for optimum performance.

### ***Ideal System Recommendations***

DentiMax suggests the following for optimum performance:

1.0 GHz or higher processor (faster is always better, especially for servers)

256 MB of RAM (again, more is always better)

40GB Hard Drive

Name-brand video capture card\* (ATI, Hauppauge)

CD-R drive

100BT or higher Local Area Network (TCP/IP preferred)

### ***Minimum System Requirements***

Although we don't suggest these specifications for today's digital dental office, DentiMax has set the following as minimums to operate DentiMax Imaging:

400Mhz or higher processor

64MB of RAM (128MB or higher is optimum)

CD-ROM drive

Local Area Network for networked installations(TCP/IP preferred; a 100-base T network is optimum)

\*A name-brand video capture card is required for image capture from analog video and intra-oral cameras. Digital sources typically use FireWire or USB for import.
